raising the average human lifespan by a decade or more will change our world the future is not about whether this will happen it is about what we should do when it happens even the most pessimistic assertions about the future of our environment are underestimating the extent of the problem there is simply no model in which more years of life does not equate to more people and in which that does not lead to more crowding environmental degradation more consumption and more waste hence as we prolong life these environmental crises will be further exacerbated with current diets and production practices feeding 7.6 billion people is degrading terrestrial and aquatic ecosystems depleting water resources and driving climate changes the challenges of today are not just population and it's not just consumption it is waste also thanks to things such as cars planes big homes deforestation and so forth the annual carbon dioxide emissions of an average are three times as high as it should be it is likely that this signals that the current level of dividends is unsustainable hence we use and return little of value to our natural world in our book we address the questions related to environmental health challenges that include contamination of air water and soil and car transportation in order to better understand natural industrial and social environmental hazards we have to think of them in a broader context i.e. physical chemical biological and cultural we hope that the presented publication gives the reader a broader perspective on the issues related to environmental health challenges in contemporary society in the coming years

an important aspect of sustainable and regenerative urban development is to improve collective well-being standards the United Nations endorsed the 2030 agenda for sustainable development in 2015 which establishes seventeen sustainable development goals (SDGs) to end poverty protect the planet and improve the lives and prospects of everyone and everywhere by 2030 urban green spaces have a significant impact on the living condition and public health which are closely associated with several SDGs including good health and well-being (SDG 3) clean water and sanitation (SDG 6) industry innovation and infrastructure (SDG 9) and sustainable cities and communities (SDG 11) here the concept of one health gains high relevance by recognizing that interconnections among humans animals and environment is a key issue in public health and wellbeing that stimulates interdisciplinary collaborations to develop a more holistic understanding and effective action against public health threats
