the present book is intended to be a systematic text on topological vector spaces and presupposes familiarity with the elements of general topology and linear algebra the author has found it unnecessary to rederive these results since they are equally basic for many other areas of mathematics and every beginning graduate student is likely to have made their acquaintance similarly the elementary facts on hilbert and banach spaces are widely known and are not discussed in detail in this book which is plainly addressed to those readers who have attained and wish to get beyond the introductory level the book has its origin in courses given by the author at washington state university the university of michigan and the university of tbingen in the years 1958 1963 at that time there existed no reasonably complete text on topological vector spaces in english and there seemed to be a genuine need for a book on this subject this situation changed in 1963 with the appearance of the book by kelley namioka et al 1 which through its many elegant proofs has had some influence on the final draft of this manuscript yet the two books appear to be sufficiently different in spirit and subject matter to justify the publication of this manuscript in particular the present book includes a discussion of topological tensor products nuclear spaces ordered topological vector spaces and an appendix on positive operators
